| Date | 29 October 2022 |
| Team ID | PNT2022TMID27426 |
| Project Name | Project – Signs with Smart Connectivity for Better Road Safety |

PROGRAM CODE :

1. Weather.py

This file contains a utility function that uses the OpenWeather API to retrieve the weather. Only a few of the necessary API response parameters are returned.

Python code

```
import requests as reqs
```

```
def get(myLocation,APIKEY):
```

```
    apiURL =
```

```
    f"https://api.openweathermap.org/data/2.5/weather?q={myLocation}&appid={API  
    KEY}"
```

```
    responseJSON = (reqs.get(apiURL)).json()
```

```
    returnObject = {
```

```
        "temperature" : responseJSON['main']['temp'] - 273.15,
```

```
        "weather" : [responseJSON['weather'][_]['main'].lower() for _ in  
        range(len(responseJSON['weather']))],
```

```
        "visibility" : responseJSON['visibility']/100, # visibility in percentage where 10km is  
        100% and 0km is 0%
```

```
    }
```

```
if("rain" in responseJSON):
```

```
    returnObject["rain"] = [responseJSON["rain"][key] for key in  
    responseJSON["rain"]]
```

```
return(returnObject)
```

2. brain.py

This file is a utility function that abstracts all unnecessary details and only returns the information that is necessary to be displayed on the hardware side. The logic for the code flow is carried out here.

```
# Python code
```

```
# IMPORT SECTION STARTS
```

```
import weather
```

```
from datetime import datetime as dt
```

```
# IMPORT SECTION ENDS
```

```
# -----
```

```
# UTILITY LOGIC SECTION STARTS
```

```
def processConditions(myLocation,APIKEY,localityInfo):
```

```
    weatherData = weather.get(myLocation,APIKEY)
```

```
    finalSpeed = localityInfo["usualSpeedLimit"] if "rain" not in weatherData else  
    localityInfo["usualSpeedLimit"]/2
```

```
    finalSpeed = finalSpeed if weatherData["visibility"]>35 else finalSpeed/2
```

```
    if(localityInfo["hospitalsNearby"]):
```

```
        # hospital zone
```

```
        doNotHonk = True
```

```
    else:
```

```

if(localityInfo["schools"]["schoolZone"]==False):

# neither school nor hospital zone

doNotHonk = False

else:

# school zone

now = [dt.now().hour,dt.now().minute]

activeTime = [list(map(int,_.split(":"))) for _ in localityInfo["schools"]["activeTime"]]

doNotHonk = activeTime[0][0]<=now[0]<=activeTime[1][0] and
activeTime[0][1]<=now[1]<=activeTime[1][1]

return({

"speed" : finalSpeed,

"doNotHonk" : doNotHonk

})

# UTILITY LOGIC SECTION ENDS

```

3. Main.py

The code that runs in a forever loop in the microcontroller. This calls all the utilfunctions from other python files and based on the return value transduces changes in the output hardware display.

```

# Python code

# IMPORT SECTION STARTS

import brain

# IMPORT SECTION ENDS

# -----

```

USER INPUT SECTION STARTS

myLocation = "Chennai,IN"

APIKEY = "9cd610e5fd400c74212074c7ace0d62c"

localityInfo = {

"schools" : {

"schoolZone" : True,

"activeTime" : ["7:00","17:30"] # schools active from 7 AM till 5:30 PM

},

"hospitalsNearby" : False,

"usualSpeedLimit" : 40 # in km/hr

}

USER INPUT SECTION ENDS

MICRO-CONTROLLER CODE STARTS

print(brain.processConditions(myLocation,APIKEY,localityInfo))

'''

MICRO CONTROLLER CODE WILL BE ADDED IN SPRINT 2 AS PER OUR
PLANNED SPRINT SCHEDULE

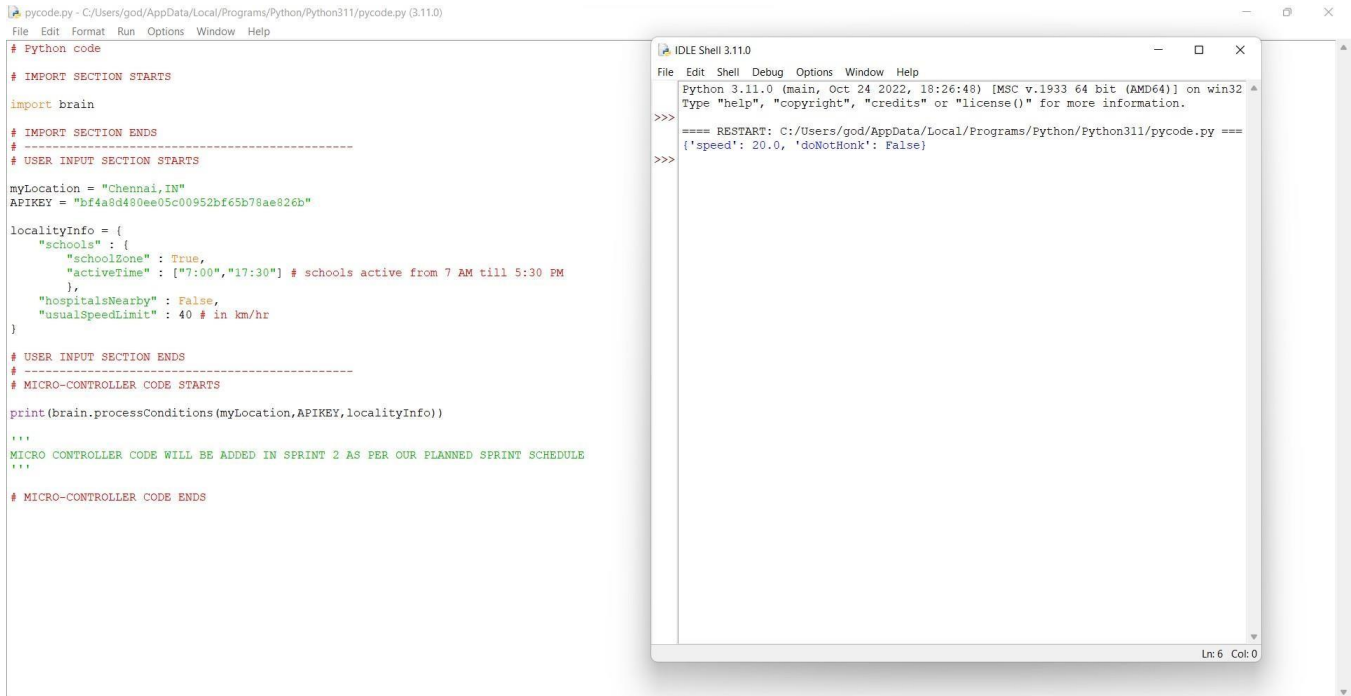

'''

MICRO-CONTROLLER CODE ENDS

OUTPUT:

Code Output

```
{'speed': 40, 'doNotHonk': False}
```

The screenshot displays a Python IDE with two windows. The left window, titled 'pycode.py - C:/Users/god/AppData/Local/Programs/Python/Python311/pycode.py (3.11.0)', contains the following code:

```
# Python code

# IMPORT SECTION STARTS

import brain

# IMPORT SECTION ENDS
# =====
# USER INPUT SECTION STARTS

myLocation = "Chennai,IN"
APIKEY = "bf4a8d480ee05c00952bf65b78ae826b"

localityInfo = {
    "schools": {
        "schoolZone" : True,
        "activeTime" : ["7:00","17:30"] # schools active from 7 AM till 5:30 PM
    },
    "hospitalsNearby" : False,
    "usualSpeedLimit" : 40 # in km/hr
}

# USER INPUT SECTION ENDS
# =====
# MICRO-CONTROLLER CODE STARTS

print(brain.processConditions(myLocation,APIKEY,localityInfo))

'''
MICRO CONTROLLER CODE WILL BE ADDED IN SPRINT 2 AS PER OUR PLANNED SPRINT SCHEDULE
'''

# MICRO-CONTROLLER CODE ENDS
```

The right window, titled 'IDLE Shell 3.11.0', shows the output of the code execution:

```
Python 3.11.0 (main, Oct 24 2022, 18:26:48) [MSC v.1933 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>>
==== RESTART: C:/Users/god/AppData/Local/Programs/Python/Python311/pycode.py ====
{'speed': 20.0, 'doNotHonk': False}
>>>
```

The status bar at the bottom right of the shell window indicates 'Ln 6 Col: 0'.
